CSCI 212 Lab - Object Oriented Programming in Java
Lab 14

1. Modify `Manager` so that it implements `Taxable`. Implement `tax()` to return 20% of the manager's pay.

2. Write a class `HourlyEmployee` that extends `Employee` and implements `Taxable`. An hourly employee has a `double rate` and a `double hours` field. Its constructor accepts the employee's name, hourly rate, and hours worked. `pay()` returns `rate * hours`. `tax()` returns 15% of the employee's pay.
